

RiverdaleGlobal®
Changing the way you think about color

**The leading innovator of
liquid color technology to
the plastics industry**
focused on economical
solutions, sustainability,
and local service.

THE WORLD'S LEADING

LIQUID COLOR
MANAGEMENT
SPECIALISTS

Our **ComputerizedColor™** solutions automate how we make, meter, and maintain color that result in the most economical and sustainable way to color plastics.

Color
Used

100%

01

MAKE

YOU CAN REDUCE PROCESS ENERGY COST IN THREE DIFFERENT WAYS

- 1 LOWER EXTRUSION
TORQUE AND AMP LOAD
- 2 LOWER HEAT PROFILE
- 3 LOWER COOLING
DEMAND

Did You Know...

Liquid color produces fully developed color with less pigment than concentrate. Final dispersion is more complete, achieving full color strength with less pigment (often 30% less than concentrate).

The better dispersion of liquid color requires less color in a plastic part giving recyclers an easier time to provide the industry with more post consumer material to replace virgin.

Liquid weighs less, which reduces transportation costs.

We offer a proprietary blend of natural carrier systems.

Our goal is to use the least amount of color possible while achieving customer's desired effect for greater product sustainability.

16%

02

METER

Overall energy savings as high as 16% have been documented.

We make color in customer containers to minimize waste every step of the way.

Gravimetric control is the only proven way to assure metering accuracy, reduce color usage, and lower your cost of coloring.

Volumetric metering systems often over-dispense expensive color. Losses can be substantial.

To ensure the accuracy required, Riverdale Global provides, as standard, its proprietary gravimetric metering system, manufactured exclusively for Riverdale by Maguire Products.

MAGUIRE[®]
Intelligent Simplicity

Pump in a Drum[®] technology limits air pressure so the tube will not blow off as it would with a peristaltic pump.

All components remain sealed and clean. Customers or environmental debris never touch the color. There is no need to own or maintain pumps, which saves capital equipment and maintenance costs.

The first complete Sealed Delivery System[™] for color and additives is clean, efficient, and easy to use.

03

MAINTAIN

GlobalTracker™ provides real-time data to track color matches, orders, and material usage with full accountability and traceability of every component. Our system eliminates waste with precise inventory tracking.

Local satellites provide support for color matching, emergencies, and frequent deliveries to keep proper inventory levels.

EQUIPMENT WE MONITOR

GlobalBot™

We took our 50 plus years of experience and technology innovation to develop a ground breaking color management system.

#ComputerizedColor

RETURN FOR REFILL™

Riverdale provides RETURN for REFILL™ service for empty containers when an order is placed for the same color. Color remaining in an "empty" container is returned to you with each refill so you use 100% of your color.

Containers **NO LONGER** go to your local landfill, helping you achieve your goal of **ZERO WASTE.**

Riverdale Global's **+GlobalPlus™ sealed additives** economically add performance, protection and sustainability to your product.
