

**RiverdaleGlobal**<sup>®</sup>  
Changing the way you think about color

**Liquid colors provide eye-catching special effects** for packaging and consumer products at low letdown levels.

### Transparent

These colors can be used at loadings of only 0.1% to tint clear resins.

### Transparent Pearl

Used at 0.5% loadings in clear resins, these colors exhibit a glitter effect.

### Blast

These colors provide super-bright pearlescent effects while minimizing flow lines.

### Deep Pearl

For these colors, Riverdale Global selected particles that provide a standard pearlescent effect at lower let-downs.

### Splash

These colors combine bright specialty pigments and pearlescent particles to yield super-bright effects.

### Metal Expression

Larger particle sizes in these colors yields a glittery metallic effect.

### Metal

These colors yield a smooth, flat surface with a metallic sheen.

### Natural

Helping to achieve sustainability goals, these are dispersions of FDA-approved colors in natural carriers, whereas the carrier resins in masterbatch are synthetic substances.

Our color design specialists will work closely with you and your team to achieve the result you desire.
